

# Elements of Nanophotonics

Oliver Benson

May 29, 2009

## Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Theoretical Concepts</b>	<b>3</b>
2.1	”Wrap-up” of classical electrodynamics . . . . .	3
2.1.1	Maxwell’s Equations . . . . .	3
2.1.2	Wave equation . . . . .	4
2.1.3	Linear media . . . . .	4
2.1.4	Time-dependent fields . . . . .	4
2.1.5	Boundary conditions . . . . .	5
2.1.6	Energy conservation . . . . .	6
2.2	Representations of electromagnetic fields . . . . .	8
2.2.1	Dyadic Green’s function . . . . .	8
2.2.2	Angular spectrum representation . . . . .	11
2.2.3	Evanescent fields . . . . .	15
2.2.4	Gaussian beams . . . . .	19
2.2.5	Focusing of Gaussian beams . . . . .	23
2.3	Image formation and resolution . . . . .	31
2.3.1	Imaging of coherent objects . . . . .	31
2.3.2	Imaging of incoherent objects . . . . .	37
2.3.3	Optical resolution . . . . .	42

<b>3</b>	<b>Experimental Tools in Nanophotonics I: Far-field Techniques</b>	<b>45</b>
3.1	Confocal microscopy . . . . .	45
3.1.1	Point-spread-function of a dipole . . . . .	45
3.1.2	Principle of confocal microscopy . . . . .	49
3.1.3	Resolution in confocal microscopy . . . . .	53
3.1.4	Experimental realization and applications . . . . .	60
3.2	Single Molecule spectroscopy . . . . .	69
3.2.1	Basics . . . . .	69
3.2.2	Methods for data analysis in single molecule spectroscopy . . . . .	74
3.2.3	Optical Tweezers . . . . .	79
3.2.4	Detection and manipulation of small bio-molecules . . . . .	86
3.3	STED microscopy . . . . .	94
3.3.1	General principle . . . . .	94
3.3.2	Resolution in STED microscopy . . . . .	97
3.3.3	Implementation . . . . .	98
3.3.4	STED results . . . . .	101
<b>4</b>	<b>Experimental Tools in Nanophotonics II: Near-field Techniques</b>	<b>103</b>
4.1	Fundamentals of SNOM . . . . .	103
4.2	SNOM Concepts . . . . .	112
4.3	Experimental Realizations . . . . .	121
4.4	SNOM Theory . . . . .	134
4.5	SNOM Trends . . . . .	138
4.6	SNOM applications . . . . .	146
<b>5</b>	<b>Fabrication Tools</b>	<b>151</b>
5.1	Introduction . . . . .	151
5.2	Epitaxy . . . . .	151
5.2.1	Molecular Beam Epitaxy . . . . .	152
5.2.2	Metal-Organic Chemical Vapour Deposition . . . . .	156
5.3	Epitaxial Growth of Heterostructures . . . . .	157
5.3.1	Quantum confinement in heterostructures . . . . .	157
5.3.2	Quantum Dots . . . . .	165
5.3.3	Nanowires . . . . .	169
5.4	Chemical Synthesis . . . . .	171

5.5	Lithography . . . . .	174
5.5.1	Optical lithography . . . . .	175
5.5.2	Electron-beam lithography . . . . .	177
<b>6</b>	<b>Physics of Single Quantum Emitters</b>	<b>181</b>
6.1	Introduction . . . . .	181
6.2	Photon Statistics and Single Photon States . . . . .	182
6.2.1	Brief review of quantization of the electromagnetic field . . . . .	182
6.2.2	Coherence functions . . . . .	186
6.3	Generation of Single-Photon States with Single Quantum Emitters . . . . .	191
6.3.1	Atoms and Ions . . . . .	192
6.3.2	Epitaxial Quantum Dots . . . . .	195
6.3.3	Colloidal Quantum Dots / Nanocrystals . . . . .	200
6.3.4	Fluorescent Molecules . . . . .	203
6.3.5	Defects in Bulk or Nanocrystalline Diamonds . . . . .	206
<b>7</b>	<b>Plasmonics</b>	<b>208</b>
7.1	Introduction . . . . .	208
7.2	Electro-magnetics in metals and on metal surfaces . . . . .	209
7.2.1	Basics . . . . .	209
7.2.2	Bulk plasmons . . . . .	209
7.2.3	Surface plasmons . . . . .	212
7.3	Excitation of surface plasmon polaritons . . . . .	218
7.3.1	Prism coupling . . . . .	218
7.3.2	Grating coupling . . . . .	219
7.3.3	Excitation using highly focused optical beams . . . . .	220
7.3.4	Near-field excitation . . . . .	222
7.3.5	Coupling to integrated photonic elements . . . . .	222
7.4	Surface plasmon waveguides . . . . .	223
7.4.1	Waveguides for long-range SPP modes . . . . .	224
7.4.2	SPP guiding in metal nanowires . . . . .	226
7.4.3	Localized modes in gaps, grooves, and ridges . . . . .	228
7.5	Localized plasmons on metal nanoparticles . . . . .	229
7.5.1	Plasmon resonance of a small spherical particle . . . . .	230
7.6	Applications of surface plasmons . . . . .	233

7.6.1	Surface enhanced Raman scattering . . . . .	233
7.6.2	Fluorescence enhancement . . . . .	234
7.6.3	Surface plasmon sensors in biology and medicine . . . . .	238
<b>8</b>	<b>Photonic Crystals and Metamaterials</b>	<b>240</b>
8.1	Introduction . . . . .	240
8.2	Maxwell's equation as eigenvalue problem . . . . .	243
8.3	Photonic Bandgaps in one dimension . . . . .	248
8.4	Realizations of photonic crystals . . . . .	253
8.5	Defects in photonic crystals . . . . .	264
8.6	Applications of photonic crystals . . . . .	269
8.7	Metamaterials . . . . .	270
8.7.1	Negative index of refraction . . . . .	270
8.7.2	Application of NI materials . . . . .	272
8.7.3	Fabrication of NI materials . . . . .	274
